abdullahadnann112233@gmail.com

Islamabad, Pakistan

ABOUT ME

Motivated and detail-oriented student passionate about robotics and technology. Proficient in creating practical projects, such as line following robots, and experienced with microcontrollers, sensors, and programming. Keen to explore new technologies and apply problem solving skills to real world challenges.

EDUCATION

Matric

Dar E Arqam School
Marks: 1051/1100
Grade: A+

Intermediate

Pak Garrison College
Marks: 1055/1200
Grade: A+

Mechatronics Engineering

In Progress - 2029

SKILLS

- Arduino Programming
- Basic Python Programming
- AutoCAD (2D/3D Design)
- Sensor Integration
- Motor Control Systems
- Electrical Analysis

LANGUAGE

- English
- Urdu

PROJECTS

Line Follower Robot *2025*

Robot Automation | Technology

- The line follower robot is an autonomous system designed to detect and follow a specific path using infrared sensors. It continuously reads surface contrasts and adjusts motor speeds to maintain direction. This project involves microcontrollers, motor drivers, and real time programming. It helps in understanding robotics concepts, sensor calibration, and embedded system design effectively.

Robot Gripper Mechanism *2025*

AutoCAD | Mechanical Design

- The robot gripper mechanism is a mechanical design created using AutoCAD to simulate object handling in robotic systems. It focuses on precise movement and firm gripping using joints and linkages. The design helps in understanding mechanical structures, force distribution, and CAD modeling. This project improves skills in 2D/3D design and practical engineering concepts.

Grocery Price Prediction & Weekly Budget Planning *2025*

Application | Budget Planner

- The Grocery Price Prediction and Weekly Budget Planning system is designed to estimate future grocery prices using available online data and assist in managing weekly expenses. It analyzes price trends and helps users plan their budget efficiently. The project focuses on data analysis, prediction techniques, and financial planning.

Career Goals

- Working toward a career in mechatronics, focusing on designing and developing smart automated systems.
- Aiming to gain hands on experience in robotics, automation, and embedded systems within the mechatronics field.
- Striving to grow as a mechatronics engineer by combining mechanical, electrical, and software skills to innovate solutions.
- Focused on building expertise in automation, robotics, and intelligent control systems for industrial applications.
- Working toward contributing to advanced mechatronic systems that integrate technology for real-world solutions.
